$\langle\phi^4\rangle^{(1)}_{\rm conn}/P_k^2\,[\lambda]$ (all $k_i = k$)
$N = \ln(1/k|\eta|)$ e-folds after horizon exit
$\nu = 1/2$
$\nu = 1$
$\nu = 5/4$
$\nu = 3/2$
linear growth in $N$ at $\nu = 3/2$:
secular term, fixed-order
expansion degrades when
$\lambda N \sim 1$
